

SHORT TERM TIPS FUND

Fund Objective

The Fund seeks to track the performance of the US Treasury Inflation Protected Securities 0-5 Years Index. The index is a market value-weighted index that measures the performance of inflation-protected securities issued by the US Treasury that have a remaining average life between 0 and 5 years.

Fund Composition

The Fund is invested in a diversified mix of inflation-protected US Treasuries with a maturity of five years or less.

Investor Profile

The Fund may be appropriate for an investor with a short-to-intermediate time horizon and a need for an inflation-protected return.

Fund Risks

Inflation-protected public obligations of the US Treasury, commonly known as "TIPS," are securities issued by the US Treasury that are designed to provide inflation protection to investors. TIPS interest and principal payments are adjusted for inflation – a sustained increase in prices that erodes the purchasing power of money. If there is deflation, the principal value of an inflation-linked security will be adjusted downward, and consequently the interest payments (calculated with respect to a smaller principal amount) will be reduced. During periods of deflation, low

inflation or no inflation, a conventional bond may perform better than inflation-linked securities. Also, if interest rates rise quickly, the value of fixed income securities that are already held by the fund could decline.

Fund Manager

The Fund is managed by BlackRock.

Fund Fee: 0.03% (as of 01/01/2025)

Fees represent the annualized fee paid to the fund manager plus plan administration fees, expressed as a percentage of the fund's value.
